Difference between While Loop and Do While Loop.

While Loop	**Do While Loop**
While loop statement is executed zero times if the condition is false.	do while statement is executed at least once.
While loop checks the condition first and then executes the statement.	do while loop will execute the statement at least once, then the condition is checked.
While loop is entry-controlled loop.	do while is exit controlled loop.
While loop allows initialization of counter variable before starting the body of a loop.	do while loop allows initialization of counter variable before and after starting the body of a loop.
